Directional valves electro-hydraulically operated (new series)			RE 24751/12.2004
Size 10 to 32	up to 35 MPa	up to 1100 L/min	

Features:

- Valves used to control the start, stop and direction of a fluid flow
- Electro-hydraulic operation (WEH), hydraulic operation (WH)
- For subplate mounting
- Spring or pressure-centred,spring or hydraulic offset
- Wet-pin DC or AC solenoids, optional
- Manual override, optional
- Electrical connection as individual or central connection
- Shifting time adjustment, optional
- Pre-load valve in the P-channel of the main valve, optional
- Auxiliary equipment:
  - Stroke adjustment at main spool, optional
  - Stroke adjustment and/or end position indicator, optional
  - Mechanical or inductive limit switch (proximity type) at the main spool, optional
- Porting pattern to Din 24 340 form A, ISO 4401 and CETOP-RP 121H

Pilot oil supply

4WEH · · · and 4WH · · ·
The pilot oil supply is sourced externally via channel X from a separate circuit.
The pilot oil drain is led externally via channel Y to tank.

4WEH · · · E · · ·
The pilot oil supply is sourced internally from channel P of the main valve.
The pilot oil drain is led externally via channel Y to tank. Port X in the subplate is plugged.
Change over from external to internal or from internal to external pilot oil supply (size 16): Remove the cover on the solenoid side "a", remove the plugs and turn end-for-end, insert plugs and re-place the cover.

4WEH · · · ET · · ·
The pilot oil supply is sourced internally from channel P of the main valve.
The pilot oil drain is led internally via channel T to tank. Ports X and Y in the supblate are plugged.

4WEH · · · T · · ·
The pilot oil supply is sourced externally via channel X from a separate circuit. The pilot oil drain is led internally via channel T to tank. Port Y in the subplate is plugged.
1 Plug screw M6-8.8 - pilot oil drain
2 Plug screws M6-8.8 - pilot oil supply
3 Plug screws M8-8.8 - for external sealing
Tightening torques M_A for cover fixing screws:
Size 16: 35 Nm
Size 25: 68 Nm
Tightening torque M_A for pilot valve fixing screws:
Sizes 10 to 32: 9 Nm
Throttle insert
The use of a throttle insert is required if the pilot oil supply in the P channel of the pilot valve is to be limited (see page 188) .
This throttle is inserted in the P channel of the pilot valve.

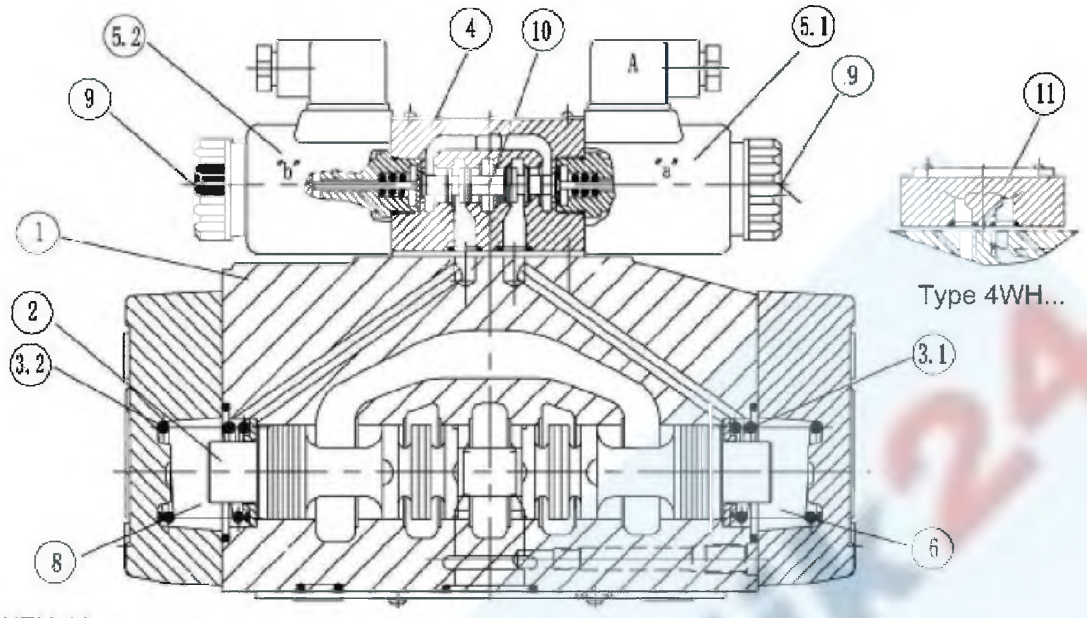
Functional,section



Type 4WH...

Type 4WEH 16 ...

Directional valves type 4WEH...

Valves of type WEH are directional spool valves with electro-hydraulic operation.

They control the start, stop and direction of a fluid flow.

The directional valves basically consist of the main valve with housing (1), main control spool (2), one or two return springs (3.1) and (3.2), and the pilot valve (4) with one or two solenoids "a" (5.1) and/or "b" (5.2).

The main control spool (2) in the main valve is held in the neutral or in the initial position either by the springs or by means of pressure.

In the initial position, the two spring chambers (6) and (8) are connected to the tank without pressure via the pilot valve (4). The pilot valve is supplied with pilot fluid via the pilot line. The pilot oil supply can be either internal or external (external via port X).

When the pilot valve is operated, e.g. solenoid "a", the pilot spool (10) is shifted to the left and thus spring chamber (8) is pressurized with pilot pressure. Spring chamber (6) remains un-pressurized.

The pilot pressure acts on the left side of the main control spool (2) and pushes it against the spring (3.1). As a consequence, the ports P to B and A to T are connected in the main valve.

When the solenoid is de-energized, the pilot spool returns to its initial position (exception: detented spool). The spring chamber (8) is unloaded to tank.

The pilot oil is expelled from the spring chamber via the pilot valve into the Y channel.

The pilot oil supply and drain are internal or external (external via port Y).

An optional manual override (9) permits pilot spool (10) to be operated without energizing the solenoid.

Directional valves type 4WH...

Valves of type WH are directional spool valves with hydraulic operation.

They control the start, stop and direction of a fluid flow.

The directional valves basically consist of the valve housing (1), the main control spool (2), one or two return springs (3.1) and (3.2) in the case of valves with spring return or spring centring, and the pilot connecting plate (11).

The control spool (2) is operated directly by means hydraulic pressure.

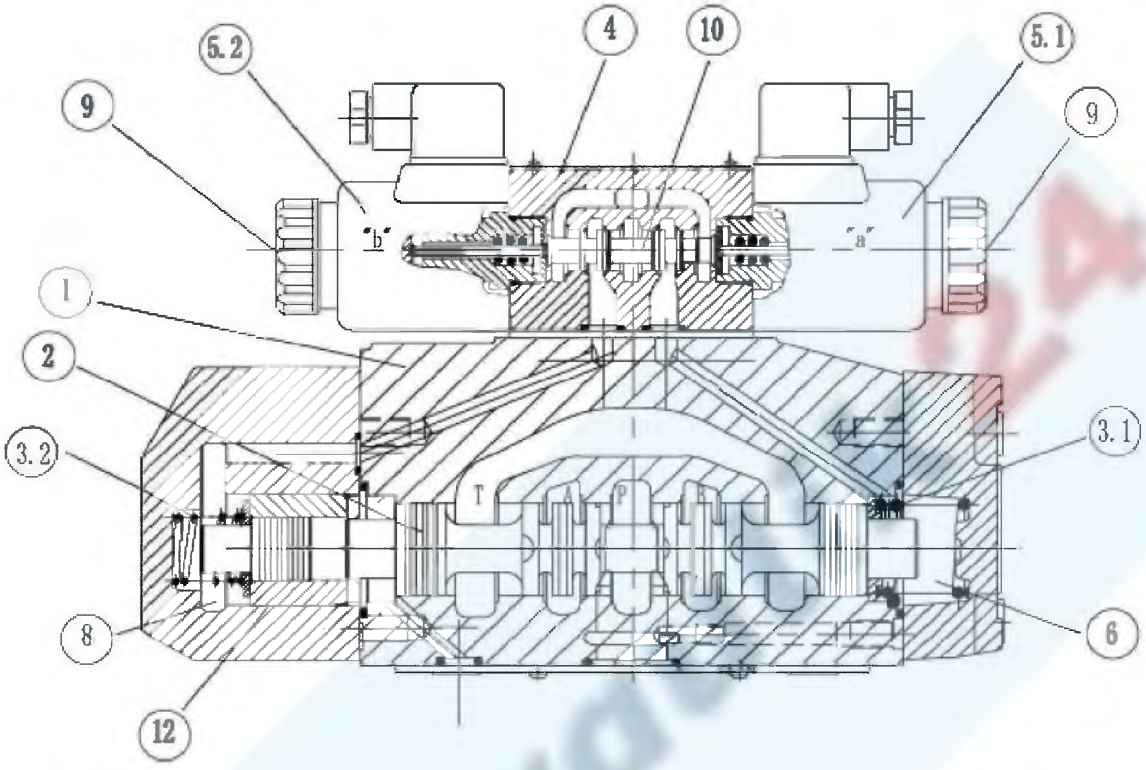
The control spool (2) is held in the neutral or in the initial position either by springs or by means of pressure. Pilot oil supply and pilot oil drain are external (see page 2).

4/3-way directional valve with spring centring of the control spool

In this model, the main control spool (2) is held in the neutral position by two return springs (3.1) and (3.2). The two spring chambers (6) and (8) are connected to ports X and Y via the connector plate (11).

When one of the two ends of the main control spool (2) is pressurized with pilot pressure, the spool is moved to the shifted position. The required ports in the valve are then opened to flow.

When the pilot pressure is removed, the spring on the opposite side to the pressurized spool area causes the spool to return to its neutral or initial position.



Type 4WEH 16 H...

4/3-way directional valve with pressure centring of the main control spool, type 4WEH··· H

The main control spool (2) in the main valve is held in the neutral position by pressurization of the two front faces. A centring sleeve (12) is supported in the housing and holds the spool in position.

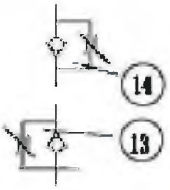
By removing the pressure from one of the spool ends, the main control spool (2) is moved to the shifted position.

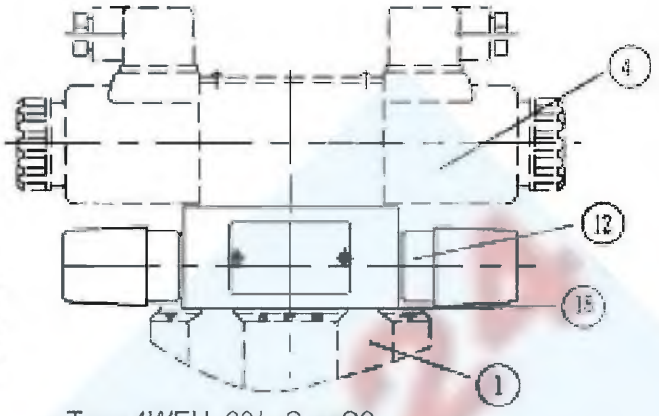
The unloaded spool area displaces the returning pilot oil via the pilot valve into the Y channel (external).

Shifting time adjustment, pressure reducing valve, pre-load valve

Shifting time adjustment

In order to influence the shifting time of the main valve (1) a double throttle check valve(12) is installed.
Change over from meter-in (13) to meter-out control (14):Remove the pilot valve 4(leave the O-ring support plate (15) in place), rotate the throttle check valve (12) about its longitudinal axis and refit it, replace the pilot valve (4).
Tightening torque for screws (16)
M_A = 9 Nm.

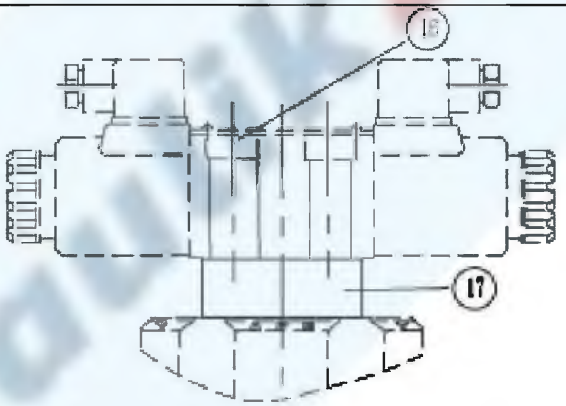




Type 4WEH..60/...S or S2

Pressure reducing valve "D3"

The pressure reducing valve (17) must be used if the pilot pressure is higher than 25 MPa.Thus, the secondary pressure is held constant at 4.5 MPa.When using a pressure reducing valve "D3" (17), a throttle insert "B10" must be installed in the P channel of the pilot valve.
Tightening torque for screws (16) M_A = 9 Nm.

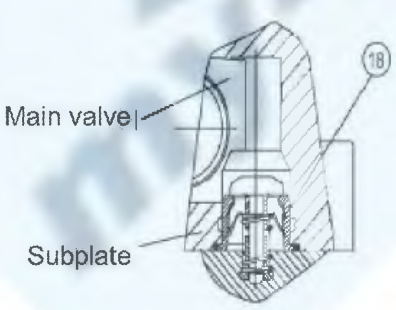


Type 4WEH..60/.../..D3

Pre-load valve (not for size 10)

In valves with pressureless by-pass and iternal pilot oil supply, a pre-load valve (18) must be installed in the P channel of the main valve to build up the minimum pilot pressure.

The pressure difference of the pre-load valve must be added to the pressure difference of the main valve (see characteristic curve) in order to determine the actual value.
The cracking pressure of this valve is approx. 0.45 MPa.



△p/qv characteristic curve (measured at v = 41 mm² /s and t = 50°C)

Spool return in the pilot valve for 2-position valve and 2 solenoids only possible with spools C、D、K、Z and hydraulic spool return in the main valve:
Without spring return = O
Without spring return with detent = OF

Pilot valve with wet-pin solenoids
Standard valve = 6A
High-performance valve = 6E

12 V DC =G12
220 V AC 50 Hz =W220-50
24 V DC =G24
DC solinoid commuting automatically =W220R

Further details in clear text

No code = mineral oils
V = phospate ester

No code = Without pressure reducing valve
D3 [2] = With pressure reducing valve

Pre-load valve (not for size 10)
No code = Without pre-load valve
P 4.5 = With pre-load valve

No code = Without throttle insert
B08 = Throttle Φ 0.8 mm
B10 = Throttle Φ 1.0 mm
B12 = Throttle Φ 1.2 mm
B15 = Throttle Φ 1.5 mm

Additional equipment NO. (see Additional equipment)

Z4 = Electrical connections
K4 [4] = with component plug

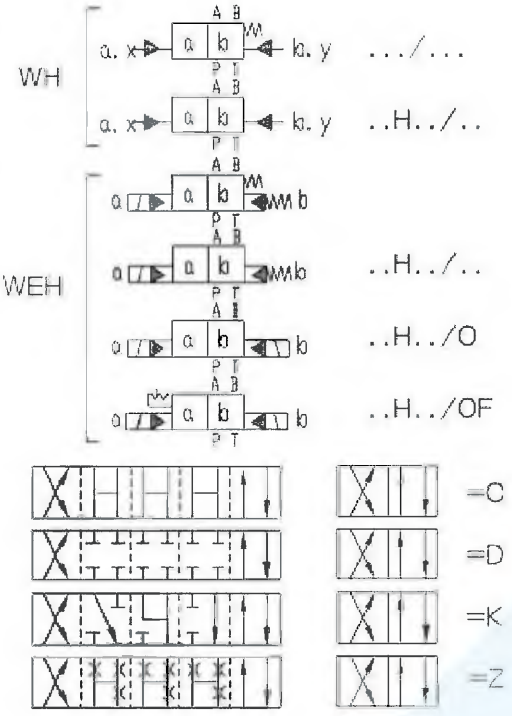
No code = Without shifting time adjustment
S = Shifting time adjustment as meter-in control
S2 = Shifting time adjustment as meter-out control

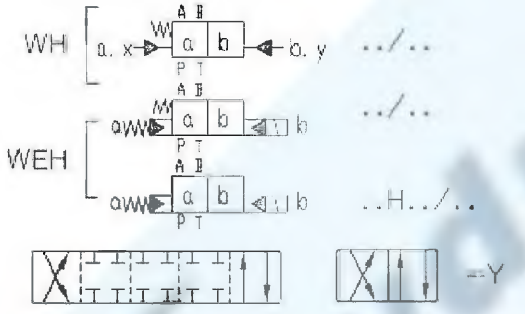
No code= Pilot oil supply external, drain external
E= Pilot oil supply internal, drain external
ET [3] = Pilot oil supply internal, drain internal
T= Pilot oil supply external, drain internal
Type 4WH...only available as No code!
Versions ET and T as 3-position valve with pressure centring only possible if $p_{pilot} \geqslant 2 \times p_{tank} + p_{pilot\,min}$!

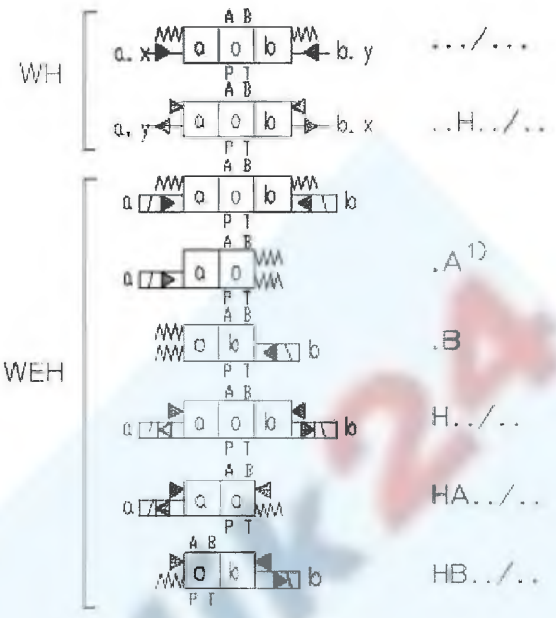
No code= Without manual override
N= With manual override
N9= With protected manual override

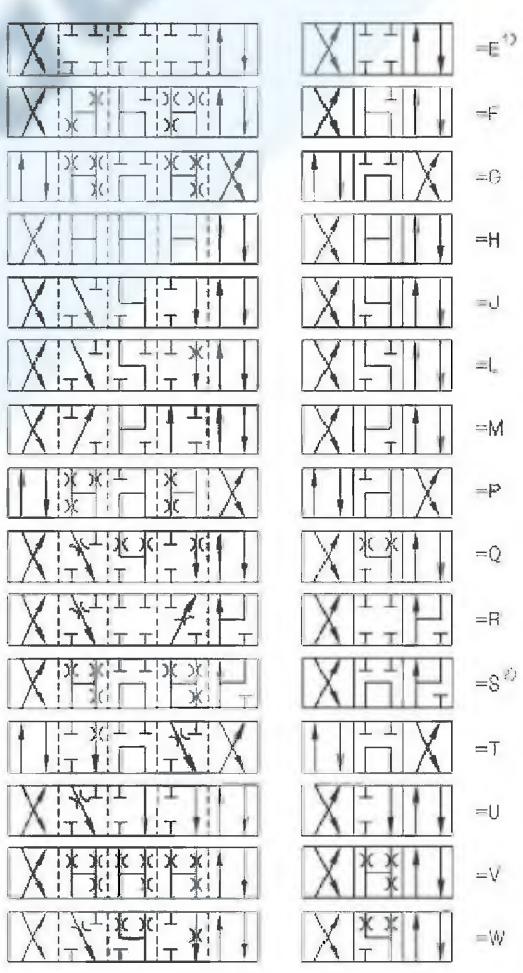
1) Unchanged installation and connection dimensions
2) Only in conjuction with throttle insert "B10"
3) With internal pilot oil supply:
Minimum pilot pressure: Please note page 192!
In order to avoid excessive pressure peaks, a throttle insert (B10) should be provided in the P port of the pilot valve .
4) Plug-in onnectors have to be ordered separately

Symbols









1) Example: Spool E, solenoid on side "a"
Order example:

General:

Attention!

The shifting performance limits shown are valid for applications with two directions of flow (e.g. from P to A and simultaneous return flow from B to T).

As a result of the flow forces occurring within the valve with only one direction of flow (e.g. from P to A with port B blocked) the permissible performance limits may be considerably lower!

(In the case of applications of this kind, please consult us.)

The performance limits were determined with the solenoid at operating temperature, 10% undervoltage and with no tank pre-loading.

Characteristic curves: Type 4WEH 16...(measured at v = 41 mm²/s and t = 50°C)

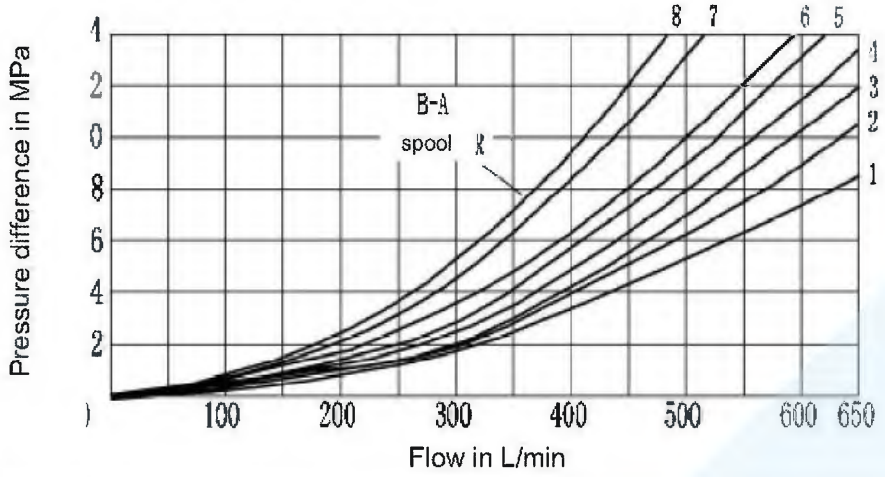
1) The flow values given are achieved when the minimum pilot pressure of 1.2 MPa is present.
2) The flow values given are limiting values at which the return spring can return the valve when the pilot pressure fails.

Attention!
When using 4/3-way directional valves with spring-centring of the control spool in the main valve, which exceeds the given performance limits, a higher pilot pressure is required.
Example: At an operating pressure of p_{max} = 35 MPa and a flow of q_v = 300 L/min, a pilot pressure of 1.6 MPa is required.
The maximum flow for those valves is therefore only dependent on the Δp value which is acceptable for the system.

Characteristic curves: Type 4WEH 25...(measured at v = 41 mm²/s and t = 50°C)



7) Spool G central position P-T
8) Spool T central position P-T

List of items:

1 Main valve

2 Pilot valve type 4WE 6 ...

2.1 · Pilot valve type 4WE 6 D(1 solenoid) for main valves with spools C, D, K, Z
spools HC, HD, HK, HZ
· Pilot valve type 4WE 6 J...(1 solenoid "a") for main valves with spools EA, FA, etc., spring return
· Pilot valve type 4WE 6 M...(1 solenoid "a") for main valves with spools HEA, HFA, etc., hydraulic spool return

2.2 · Pilot valve type 4WE 6 Y...(1 solenoid) for main valves with spool Y spool HY
· Pilot valve type 4WE 6 J...(1 solenoid "b") for main valves with spools EB, FB, etc.,spring return
· Pilot valve type 4WE 6 M...(1 solenoid "b") for main valves with spools HEB, HFB, etc., hydraulic spool return

2.3 · Pilot valve type 4WE 6 J...(2 solenoids) for main valves with 3 positions, spring-centred
· Pilot valve type 4WE 6 M...(2 solenoids) for main valves with 3 positions, pressure-centred

3.1 Solenoid "a" (grey plug-in connector)

3.2 Solenoid "b" (black plug-in connector)

4 Manual override "N", optional

- The manual override can only be operated up to a tank pressure of up to approx. 5MPa.
Take care not to damage the manual override bore!

5 Solenoid without manual override

6 Height of the connector plate for hydraulic operation (type 4WH...)

7 Shifting time adjustment (A/F 6), optional

8 Pressure reducing valve, optional

9 Machined valve mounting surface, position of ports

10 Nameplate for the pilot valve

11 Nameplate for the entire valve

12 O-rings

13 Space required to remove the plug-in connector

14 2-position valves with spring offset in the main valve (C, D, K, Z)

15 2-position valves with spring offset in the main valve (Y)

16 3-position valves, spring-centred;
2-position valves with hydraulic offset in the main valve
